1 June 2017

Greetings from Glenrossie!

We have had a very challenging year, with three months without rain and then six months rain in six weeks! With the loss of some of our people last year, we've had to make a few changes. However, nothing has changed with the management of the stud stock and while they have been challenged by the season, we are happy with the way they have bounced back and the stock are looking good going into the winter.

There is a lot of information about the bulls on our website www.glenrossie.co.nz. They each have their own page with all of their details. We have decided to continue with putting up videos of the bulls on the website/YouTube/Facebook this year. We hope that this helps those of you that are situated further afield and are unable to come and view the bulls. There is limited space in the catalogue, so the website is your best bet for photos/videos and extended pedigrees.

You can check out our Facebook page www.facebook.com/GlenrossieBeef year round to see what we've been up to. We share photos and some videos of the everyday happenings here on the farm. Of course we are always glad to hear from you, so feel free to comment, email or phone us any time.

We have included weights and traits of the bulls in the catalogue. This includes recorded weights and scanning data for the bulls over their lifetime. Our bulls were scanned 18/01/17, a month earlier than usual. Bulls around the country are scanned at different times, so this data can only be used to compare Glenrossie bulls to Glenrossie bulls, not to any other herd around the country.

I have included the 'traits observed' under the EBVs in the catalogue this year. This is what we actually record and input to Breedplan. The rest are calculated without our input. If you have any questions, please ask.

We continue to put the emphasis of our herd on structural soundness, conformation and type. Fertility is also important, all empties are culled. We inspect every female before she is joined to a bull every year of her life, to make sure that we are producing the best quality cattle that we possibly can and try to use bulls that fit in with those values.

We try to obtain at least one new herd sire per year, to keep introducing new blood and we endeavour to maintain the high standard of bulls offered over the last 48 years since the Glenrossie Stud was established.

We are looking forward to catching up with you at the sale.

Regards

The Glenrossie Team

CONDITIONS OF SALE

- The sale will be conducted in accordance with conditions of sale set down by the Northland Stock and Station Agents Association - a copy of which will be exhibited at the sale.
- **RISK:** Each lot will be at the risk of the purchaser as from the fall of the hammer. No errors or omissions in this catalogue will in any way invalidate the sale.
- **FINANCE:** Terms are cash before delivery unless credit arrangements have been made with the Auctioners prior to sale.
- All bulls in this catalogue are guaranteed fertile.
- This herd is Tuberculosis and Brucellosis accredited.
- Buyers are advised to complete the instruction slip in the back of the catalogue as to transport, insurance and transfers.
- An over-riding commission of 6% is payable to non-participating Companies introducing buyers prior to the sale.

OFFERING COMPRISES OF

**19 2yr Beef Shorthorn Bulls
4 2yr Santa Gertrudis Bulls**

**AUCTIONEERS
PGG WRIGHTSON LTD**

**Bernie McGahan
A/H 09 425 7102 or 0275 902 210**

DISCLAIMER

All details and descriptions as to stock referred to in this catalogue have been supplied to PGG Wrightson by the Vendor and have not been independently verified by PGG Wrightson. PGG Wrightson, its employees and agents make no representations or warranties or acknowledgement of any kind whatsoever in relation to any part of this catalogue (including but not limited to the accuracy or completeness of details and descriptions of stock [and other contents]).

Purchasers, advisors and all other persons viewing or dealing with the stock must make their own assessment and judgement on the stock and the information in this catalogue.

PGG Wrightson, its employees and agents are not responsible or liable in any way whatsoever, whether in contract, tort (including negligence), or otherwise, to any person for any loss or damage whatsoever arising directly or indirectly from any information or representation included in or omitted from this catalogue.

Foreword

The Glenrossie Beef Shorthorn Stud was founded in 1969 with the purchase of Stud Loch females from Malcolm Anderson along with the imported bull Burnton Banter.

We have continued to use top Australian (AI) and New Zealand sires, including 2002 National Sale Beef Shorthorn Champion Austins Ideal 007 and recently purchased 2013 National Sale Beef Shorthorn Champion Corsock Dazzler 11384. Our commitment to quality has never changed.

Our Santa Gertrudis cattle were originally graded up from selected Beef Shorthorn females and have been bred to the same commercial criteria as our Beef Shorthorns.

Current Sires are:

Kilkee Rising Sun (AI)	Corsock Dazzler 11384
Glenrossie Hamilton 12061	Rough Ridge Primo 30
Rough Ridge Enhance 9	Northend TAGD0832
Glenrossie Maximus J105	

Our aim has always been to breed structurally sound, well fleshed, fast growing bulls for commercial beef producers. Our cattle are run under commercial conditions on grass, silage and hay only.

We use utes, dogs and we work our cattle on foot. We do not use bikes or horses so please remember that the bulls will need time to get used to them. When your bull arrives please have a few quiet steers or in calf cows in the yards as mates for him. Put him and his mates in a smallish paddock with plenty of grass and feed him some hay or silage for the first week or two until he gets used to you and the routine on your farm.

We offer free delivery north of the Harbour Bridge and have added concessions for buyers further afield.

Bulls are TB accredited C10 and have been BVD tested and vaccinated. Bulls are fully guaranteed for 12 months from the date of purchase for structural soundness and fertility - if there is any problem, we want to know about it so we can fix it.

We do not do stud transfers for bulls with a purchase price less than \$5000.

PLEASE NOTE: When reading tables of data, the bottom row is ACTUAL weights and scanning data. The dates are the date of weighing. Scanning date was 18/01/17.

Any questions please ask us and we will be happy to help.

The Ody family.

Understanding Estimated Breed Values (EBVs)

Only 2016 Trans-Tasman Shorthorn GROUP BREEDPLAN EBVs or interim EBVs with Accuracy (Acc) can be validly compared between Shorthorn herds.

EBVs OF ONE BREED CANNOT BE COMPARED WITH EBVs OF ANOTHER BREED.

ESTIMATED BREEDING VALUES (EBVs): The EBV is an estimate of the genetic value of that particular animal for each trait measured.

ACCURACY: Accuracy (%) gives an indication of the amount of information that has been used in the calculation of that EBV. An accuracy of below 75% should be regarded as low, between 76-90% as medium and above 90% as high. Young bulls with performance data but no progeny will all have similarly low accuracies.

Average EBVs for 2015 born animals

CE DI	CE DT	GL	BW	200D	400D	600D	MCW	MILK
+0.5	+0.6	-1.6	+3.0	+26	+36	+49	+42	+6
SS	CWT	EMA	RIB	RUMP	RBY	IMF	SR	DI
+1.4	+33	+4.1	-0.5	-0.5	+1.0	+0.5	+\$52	+\$24

CALVING EASE:

Calving Ease EBVs(%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs indicate easier calving. **DI**=animal's influence on progeny. **DT**=daughter's calving ease.

GL: Gestation Length EBV. Lighter birth weights, easier calving and increased growth.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. Important when selecting sires for use over heifers.

FERTILITY:

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

GROWTH:

MILK: 200-Day Milk EBV (kg) is an estimate of the animal's milking ability. For sires, this EBV is indicative of their daughters milking ability as it affects the 200 and 400 day weight of their calves.

200W: 200-Day Growth EBV (kg) is calculated from the weight of animals taken from 80 to 300 days of age. Values are adjusted to 200 days and for age of dam. Best estimate of an animal's genetic merit for growth to early stages.

400W: 400-Day Weight EBV (kg) is calculated similar to 200W from animals 301-500 days of age. Best estimate of an animal's genetic merit for yearling weight.

600W: 600-Day Weight EBV (kg) is calculated similar to 400W from animals 501-900 days of age. Best estimate of an animal's genetic merit for growth beyond yearling age.

MCW: Mature Cow Weight EBV (kg) is an estimate of the genetic differences in cow weight at five years of age.

MEAT YIELD:

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the 12/13th rib site of a 300kg dressed carcase. More positive EBVs indicate better muscling on

animals.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for the 300kg dressed carcass.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat (marbling) at the 12/13th rib site in a 300kg dressed carcass. Depending on market targets, larger more positive values are generally more favourable.

SELF - REPLACING INDEX:

SR: The Self-replacing Index ranks bulls on their ability to generate profit (profit per cow mated) in a herd situation in which some females are retained for breeding and surplus females, along with all males, are slaughtered.

The main drivers of profit addressed by the Index include (in order of economic importance)

- Direct and Maternal Calving Ease
- Growth
- Meat Yield
- Cow Survival
- Finishing Ability
- Fertility
- Cow Efficiency

In short, selection on the Index is expected to favour production of a cow herd with excellent reproductive efficiency, rearing progeny with moderate-to-high growth rates and high yielding carcasses.

- Comparing the lifetime profitability of two bulls:

The following example illustrates how potential differences in lifetime profitability can be approximated between bulls with different indexes. These estimates of value differences may be conservative.

Two bulls with Self-replacing Indexes of \$40 and \$20 are mated to genetically similar cows. If each bull mates 200 cows during its lifetime, the first bull will generate \$2000 $(\$40-20)/2 \times 200$ more profit during its lifetime than the second bull (the profit advantage must be divided by 2 because a bull only passes half his genes onto each of his progeny).

DAIRY INDEX:

DI: Estimates the genetic differences between animals in net profitability per cow joined for an example commercial dairy herd targeting the production of dairy beef progeny from dairy cows and heifers where all progeny are slaughtered. Steers are assumed marketed at 520kg live weight (280kg carcass and 6mm fat depth) at 20 months of age. While calving ease is by far the most important profit driver in the index, growth and to a lesser extent meat yield also contribute.

The Trans-Tasman Shorthorn GROUP BREEDPLAN Estimated Breeding Values contained in this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Shorthorn Society of Australia, the Beef Shorthorn Society of Australia, the New Zealand Beef Shorthorn Association nor the ABRI oversee or audit the collection of this data.
