2 June 2019

Greetings from Glenrossie!

Not a lot to say about the weather this year without sounding like a whinger, but wow, what a dry and awful spring, summer and autumn we have had. We were expecting a drought breaking flood at the end of March, which never came and as I write this we have had a week of showery weather and things are certainly wetter than they have been for a very long time. I've almost forgotten what mud looks like and spend more time driving over cracks in the ground than puddles.

While we don't normally supplement our bulls, we decided that this year we had no choice if we were to produce sale bulls with any condition, so we have been supplementing them with around half a kilo of sugar beet per bull per day since mid March. The Santas once again were not bothered by the dry and poor quality feed and while our Santas are not big this year, they certainly have the ability to keep putting on condition in very trying conditions.

There is a lot of information about the bulls on our website www.glenrossie.co.nz. They each have their own page with all of their details. We have decided to continue with putting up videos of the bulls on the website/YouTube/Facebook this year. We hope that this helps those of you that are situated further afield and are unable to come and view the bulls. There is limited space in the catalogue, so the website is your best bet for photos/videos and extended pedigrees.

You can check out our Facebook page www.facebook.com/GlenrossieBeef year round to see what we've been up to. We share photos and some videos of the everyday happenings here on the farm. Of course we are always glad to hear from you, so feel free to comment, email or phone us any time.

The stock have held up well, the calves were weaned at the usual time to around the same weights as normal, so the cows did a great job on very little grass and a bit of silage. We struggled to grow hay this year, putting away only 1080 of our normal 2500 bales. Seeing the writing on the wall, we sold some big steers in the spring and planted 2 paddocks of summer crops, which went for about 2 months before giving up. We sold our lambs store in the autumn and actually did very well, store lamb prices were crazy! We also sold store heifers for the first time in forever. I'm sure plenty of you have the same story to tell, here's to a better year coming!

Each year we continue to invest in genetics and we have obtained some new AI from Australia this year, both Santa and Shorthorn. We also recently purchased a bull from Brown's at the Central Combined Bull Sale in Taupo.

We are looking forward to catching up with you at the sale.

Regards
The Glenrossie Team

CONDITIONS OF SALE

- The sale will be conducted in accordance with conditions of sale set down by the Northland Stock and Station Agents Association - a copy of which will be exhibited at the sale.
- **RISK:** Each lot will be at the risk of the purchaser as from the fall of the hammer. No errors or omissions in this catalogue will in any way invalidate the sale.
- **FINANCE:** Terms are cash before delivery unless credit arrangements have been made with the Auctioneers prior to sale.
- All bulls in this catalogue are guaranteed fertile.
- This herd is Tuberculosis and Brucellosis accredited.
- Buyers are advised to complete the instruction slip in the back of the catalogue as to transport, insurance and transfers.
- An over-riding commission of 6% is payable to non-participating Companies introducing buyers prior to the sale.

DISCLAIMER

All details and descriptions as to stock referred to in this catalogue have been supplied to PGG Wrightson by the Vendor and have not been independently verified by PGG Wrightson. PGG Wrightson, its employees and agents make no representations or warranties or acknowledgement of any kind whatsoever in relation to any part of this catalogue (including but not limited to the accuracy or completeness of details and descriptions of stock [and other contents]).

Purchasers, advisors and all other persons viewing or dealing with the stock must make their own assessment and judgement on the stock and the information in this catalogue.

PGG Wrightson, its employees and agents are not responsible or liable in any way whatsoever, whether in contract, tort (including negligence), or otherwise, to any person for any loss or damage whatsoever arising directly or indirectly from any information or representation included in or omitted from this catalogue.

OFFERING COMPRISES OF

15 2yr Beef Shorthorn Bulls
4 2yr Santa Gertrudis Bulls

AUCTIONEERS
PGG WRIGHTSON LTD

Bernie McGahan
A/H 09 425 7102 or 0275 902 210

Foreword

The Glenrossie Beef Shorthorn Stud was founded in 1969 with the purchase of Stud Loch females from Malcolm Anderson along with the imported bull Burnton Banter.

We have continued to use top Australian (AI) and New Zealand sires, including 2002 National Sale Beef Shorthorn Champion Austins Ideal 007 and 2013 National Sale Beef Shorthorn Champion Corsock Dazzler 11384. Our commitment to quality has never changed.

Our Santa Gertrudis cattle were originally graded up from selected Beef Shorthorn females and have been bred to the same commercial criteria as our Beef Shorthorns.

Current Sires are:

Saskvalley Taskforce (AI)
Glenrossie Hamilton 12061
Rough Ridge Enhance 9
Glenrossie Maximus J101

Dangarfield Universe (P) (AI)
Rough Ridge Primo 30
Balgree Maximus (P) (AI)

Our aim has always been to breed structurally sound, well fleshed, fast growing bulls for commercial beef producers. Our cattle are run under commercial conditions on grass, silage and hay only. We have supplemented the bulls with sugar beet this year due to the very dry conditions.

We use utes, dogs and we work our cattle on foot. We do not use bikes or horses so please remember that the bulls will need time to get used to them. When your bull arrives please have a few quiet steers or in calf cows in the yards as mates for him. Put him and his mates in a smallish paddock with plenty of grass and feed him some hay or silage for the first week or two until he gets used to you and the routine on your farm.

We offer free delivery north of the Harbour Bridge and have added concessions for buyers further afield.

Bulls are TB accredited C10 and have been BVD tested and vaccinated. Bulls are fully guaranteed for 12 months from the date of purchase for structural soundness and fertility - if there is any problem, we want to know about it so we can fix it.

We do not do stud transfers for bulls with a purchase price less than \$5000.

PLEASE NOTE: When reading tables of data, the bottom row is ACTUAL weights and scanning data. The dates are the date of weighing. Scanning date was 16/01/19.

Any questions please ask us and we will be happy to help.

The Ody family.

Understanding Estimated Breed Values (EBVs)

Only 2018 Trans-Tasman Shorthorn GROUP BREEDPLAN EBVs or interim EBVs with Accuracy (Acc) can be validly compared between Shorthorn herds.

EBVs OF ONE BREED CANNOT BE COMPARED WITH EBVs OF ANOTHER BREED.

ESTIMATED BREEDING VALUES (EBVs): The EBV is an estimate of the genetic value of that particular animal for each trait measured.

ACCURACY: Accuracy (%) gives an indication of the amount of information that has been used in the calculation of that EBV. An accuracy of below 75% should be regarded as low, between 76-90% as medium and above 90% as high. Young bulls with performance data but no progeny will all have similarly low accuracies.

Average EBVs for 2017 born animals

CE DI	CE DT	GL	BW	200D	400D	600D	MCW	MILK
+1.5	+1.5	-1.8	+2.9	+27	+38	+51	+43	+6
SS	CWT	EMA	RIB	RUMP	RBY	IMF	SR	DI
+1.5	+34	+4.3	-0.3	-0.3	+1.0	+0.5	+\$56	+\$27

CALVING EASE:

Calving Ease EBVs(%) are based on calving difficulty scores, birth weights and gestation length information. More positive EBVs indicate easier calving. **DI**=animal's influence on progeny. **DT**=daughter's calving ease.

GL: Gestation Length EBV. Lower or negative values indicate a shorter gestation length, therefore easier calving.

BWT: Birth Weight EBV (kg) is based on the measured birth weight of animals, adjusted for dam age. The lower the value, the lighter the calf at birth and the lower the likelihood of a difficult birth. Important when selecting sires for use over heifers.

FERTILITY:

SS: Scrotal Size EBV (cm) is an indicator of male fertility in regards to semen quality and quantity. Higher (positive) EBVs indicate higher fertility. SS is also positively associated with female fertility.

GROWTH:

MILK: 200-Day Milk EBV (kg) is an estimate of the animal's milking ability. For sires, this EBV is indicative of their daughters milking ability as it affects the 200 and 400 day weight of their calves.

200W: 200-Day Growth EBV (kg) is calculated from the weight of animals taken from 80 to 300 days of age. Values are adjusted to 200 days and for age of dam. Best estimate of an animal's genetic merit for growth to early stages.

400W: 400-Day Weight EBV (kg) is calculated similar to 200W from animals 301-500 days of age. Best estimate of an animal's genetic merit for yearling weight.

600W: 600-Day Weight EBV (kg) is calculated similar to 400W from animals 501-900 days of age. Best estimate of an animal's genetic merit for growth beyond yearling age.

MCW: Mature Cow Weight EBV (kg) is an estimate of the genetic differences in cow weight at five years of age.

MEAT YIELD:

CWT: Carcase Weight EBV (kg) estimates the genetic difference in carcase weight at a standard age of 650 days.

EMA: Eye Muscle Area EBV (cm²) estimates genetic differences in eye muscle area at the

12/13th rib site of a 300kg dressed carcass. More positive EBVs indicate better muscling on animals.

RIB: Rib Fat EBV (mm) estimates the genetic differences in fat depth at the 12/13th rib in a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RUMP: Rump Fat EBV (mm) estimates the genetic differences in fat depth at the P8 site of a 300kg dressed carcass. More positive EBVs indicate more subcutaneous fat and earlier maturity.

RBV%: Retail Beef Yield Percent EBV (%) represents total (boned out) meat yield as a percentage of a 300kg dressed carcass. A more positive EBV indicates higher percentage yield for the 300kg dressed carcass.

IMF%: Intra-muscular Fat Percent EBV (%) is an estimate of the genetic difference in the percentage of intra-muscular fat (marbling) at the 12/13th rib site in a 300kg dressed carcass. Depending on market targets, larger more positive values are generally more favourable.

SELECTION INDICES

Shorthorn selection indices are calculated for two market specifications, namely, Self Replacing and Dairy. These Indices relate to typical commercial herds in New Zealand targeting these specifications.

Index values are reported as EBVs, in units of relative earning capacity (\$'s) for a given market. They reflect both the short-term profit generated by a sire through the sale of his progeny, and the longer-term profit generated by his daughters in a self-replacing cow herd (where applicable). A selection index combines the EBVs with economic information (costs and returns) for specific market and production systems to rank animals based on relative profit values. Note that different types of animals can give similar profit values, so consideration should be given to both the index and the component EBVs when selecting animals for a particular production system.

Self Replacing Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial self replacing Shorthorn herd targeting the production of pasture finished steers. Steers are assumed marketed at 545 kg live weight (300 kg carcass weight and 10 mm P8 fat depth) at 18 months of age. Daughters are retained for breeding. This index is also suitable in situations where Shorthorn sires are used over mixed British breed cows.

Dairy Index (\$) - Estimates the genetic differences between animals in net profitability per cow joined for an example commercial dairy herd using Shorthorn bulls over dairy cows targeting the production of pasture finished dairy beef progeny. Steers and heifers are assumed marketed at 520 kg live weight (280 kg carcass weight and 6 P8 mm fat depth) at 20 months of age. All progeny are slaughtered with no replacement females being retained.

The Trans-Tasman Shorthorn GROUP BREEDPLAN Estimated Breeding Values contained in this sale catalogue were compiled by the Agricultural Business Research Institute (ABRI) from data supplied by the breeders. Neither the Shorthorn Society of Australia, the Beef Shorthorn Society of Australia, the New Zealand Beef Shorthorn Association nor the ABRI oversee or audit the collection of this data.
